

KITCHENAID 1.25 L WATER KETTLE

KitchenAid presents a classic shape water kettle

HAMBURG, FEBRUARY 2015. Stylish tea times cannot do without it: a top of the line water kettle. Many useful features like a removable lime scale filter, a 360 degree rotation base and a removable aluminium lid for filling make this new kettle easy to use and operate.

The KitchenAid Water Kettle will boil large amounts of water in record time, thanks to 1.500 watts of power. Inner water level markings show you the exact quantity of water. The non-drip pouring spout made of stainless steel prevents you from spilling any hot water when filling cups or teapots.

KitchenAid's new product is, of course, pleasing to the eye: the classic kettle shape, the easy to grip aluminium handle and the aesthetic spout combine stylish design with nostalgic charm. With such a precious gem of kitchen technology, you can expect tea time to last a couple of minutes or cups longer than usual.

KitchenAid – Serious About Food

Price:

KitchenAid Water Kettle: Empire Red, Onyx Black, Almond Cream and Stainless Steel, from €99, available October 2014
